

Name of course:

Merging Measurements and Modeling in Soil Physics

ECTS credits: 5**Course parameters:**

Language: English

Level of course: PhD course

Time of year: 8 – 13 May 2023

No. of contact hours/hours in total incl. preparation, assignment(s) or the like: 150 hrs

Capacity limits: 28 participants

Course fee: 600 EURO

Objectives of the course:

This course will present accepted and emerging concepts of key processes of water flow in unsaturated porous media. These concepts will be presented together with standard and novel methods to make the measurements necessary to describe these processes. The focus of the course is the need for a unified treatment of measurement and modelling in quantitative soil physics. Specifically, we will discuss how advancements in our understanding of soil physics should guide the design of measurement and monitoring efforts. Similarly, we will discuss how the interpretation of measurements made with emerging indirect methods should be made in the context of the soil physical model of interest.

Learning outcomes and competences:

At the end of the course, the student **should be able to:**

Measure and analyze

- Soil water retention data from oven-dry to water saturated
- Saturated and unsaturated hydraulic conductivity data
- Soil diffusivity data
- Air Permeability data
- Leaching of solutes, colloids, and nutrients data
- Soil water repellency
- Understand the principles of near infrared spectroscopy
- Understand modelling theory
- Do modelling of solute transport in Hydrus
- Perform coupled hydro geophysical analysis
- Perform measurement and modeling integration
 - Investigate the value of data
 - Do decision support

Compulsory programme:

Preparatory reading must be completed before course start. The student should participate in the entire course; all lecture, all laboratory experiments, and all exercises. All assignments must be finalized and the final exam passed.

Course contents:

Theoretical lectures, computer laboratory, field-work, laboratory measurements, data analysis, computer modelling. Merging of measurements and modelling.

Prerequisites:

The course is for PhD students, but MSc students with a soils background and interest in PhD enrollment can be admitted

Name of lecturer[s]:

Name of lecturers: Professors Ty Ferré, University of Arizona, Professor Per Moldrup, Aalborg University, and Professors Lis Wollesen de Jonge, Bo Vangsø Iversen, Mogens Greve, Emmanuel Arthur, Maria Knadel, and Trine Nørgaard Aarhus University

Type of course/teaching methods:

Lectures, seminars, exercises, data analysis, modelling, team work

Literature:

Book chapters, articles, and laboratory protocols will be made available well in advance of the course.

Course homepage:

To be added (here the student should inform on their relation to EJP, in case of over booking)

Course assessment: Daily assignments, presentations, and final exam

Provider: Department of Agroecology, Aarhus University, Denmark

Special comments on this course:

This course is primarily intended for PhD students from EJP SOIL affiliated institution, but is open to other participants from non-EJP institutions.

It is a very intensive course, so do expect long days. Dinner, coffee, cake, and fruit is included in the course fee.

Time: 8 – 13 May 2023

Place: AU Campus Viborg, Blichers Allé 20, DK-8830 Tjele

Registration: xxxxxxxx a link will be added

PLEASE NOTE: Deadline for pre-registration is April 30, 2023 (but we close at 24 students)

If you have any questions, please contact PhD Course Secretary Jytte Christensen; e-mail: jytte.christensen@agro.au.dk.
